CUES Releases New Air Cutter Motor

March 27, 2006

Orlando, Florida USA - CUES has developed a new .9hp air motor for it's small Kangaroo cutter line to provide more power, increased productivity, and a smoother cut when operating in 8" - 12" relined pipe. The small and large CUES Kangaroo cutters function in a range of 6" through 30" pipe and are widely used by major fold and form and CIPP lining companies.

According to Doug Beck, Engineering Technician at Reynolds Inliner, who recently field-tested the new air motor and subsequently placed a multiple-motor order, "This motor has significantly more power across the board. Lubrication can be used, but it is not necessary because of the oil-less Teflon impregnated vanes. The simple and smooth design prevents resin from entering the motor housing and allows for easier resin removal." Kits are available to retrofit existing cutters and service kits can be purchased for regular maintenance intervals on existing motors.

About CUES - CUES is the world's largest and oldest manufacturer of pipeline TV inspection and rehabilitation equipment. With headquarters and a manufacturing facility located in Orlando, FL, CUES employs more than 160 full time employees to support its customers' needs. Additional facilities with stocking warehouses and service personnel are located in California, Texas, Maastricht, The Netherlands, and Toronto, Canada. For more information, visit www.cuesinc.com.
