CUES Introduces New Technology for Sanitary & Storm Sewer Inspection - The Laser Precision Measurement System

Orlando, FL, August 30, 2007 – CUES, the leading manufacturer of CCTV pipeline inspection equipment and asset inspection / decision support software, announces the release of the OZII Camera with Laser Diode Measurement System. The OZII with Laser Diodes combines the latest laser beam technology with an advanced digital video caliper for precise measurement of pipe joints, cracks, defects, debris and other abnormalities within the pipeline without the need to enter the pipeline.

The Laser Precision Measurement System features special LED lighthoods that incorporate dual laser diode projectors. The two laser beams are precision aligned to a known separation distance regardless of the distance of the object to be measured or the cameras zoom position. The OZII with Laser Diodes eliminates spherical distortion, pin cushioning, or barrel distortion that's found in other pipeline inspection cameras. The optical distortions found in other cameras do not allow for accurate calibration and measurements, just as a physical measurement off of a video monitor is also inaccurate.

The Laser Measurement System includes an OZ II-LD Camera and a Digital Video Caliper (DVC). The Digital Caliper overcomes the non-linearity and precision limitations found in analog video calipers. The system allows for the precise measurement of an object on any of three axis including the vertical, horizontal or diagonal axis. Measurement can be in Metric or English units. The numeric measurement data can be displayed in any one of eight selectable colors and located anywhere within the video image for viewing on a video monitor or recording on a VCR, CD, or DVD. Please contact CUES sales at 800-327-7791 for additional information or visit our website at www.cuesinc.com.
